

{loadposition web-applications-GeoBlocker}

Many web developers are looking for an easy way to block settings countries, states / provinces, regions,

On the other hand, if you (have a list of only) approved countries, states / provinces, regions, zip codes / p

Features:

- Apply to the **entire website** or to a **specified subset of pages**
 - Block website access by country
 - Block website access by US States or provinces
 - Block website access by Zip Codes or Postal Code (including the ability to enter an entire range)
 - Block website access by Telephone Area Codes (including the ability to enter an entire range)
 - Alternatively, allow only a list of pre-approved areas and block all others
 - Exclude IP addresses or (range of IP addresses) from being blocked using comma separated values
 - Check visitor's IP address (once every 15 minutes) instead on every page load to improve speed and
 - Display blocked message to website visitor (the blocked IP address is visible to visitor) when they arrive
 - External server look-ups mean you get the most up-to-date information without any manual updating
- By default, the plugin uses [GeoIP External Server](#) to look-up the geographical address of visitors that, which

Compatibility:
